300+	Major life stress	80% chance of illness

Stress is the wear and tear on the body and mind - our physical and psychological response to events that worry, pressure, threaten, thrill, challenge or scare us. Physical stress can be anything from accidental injury to exposure to air pollution. Psychological stress is usually something we see as causing a threat to or change in our way of life, self-esteem or relationships. Stress can drain us physically and emotionally and lower our resistance to illness. However, stress is only as harmful as our reaction to it.
